## Using the FTB-5240S Optical Spectrum Analyzer in the FTB-400 Universal Test System

The FTB-5240S Optical Spectrum Analyzer is fully supported in the FTB-400 Universal Test System, except for the automated in-band OSNR measurement feature (available on FTB-5240S-P models).

However, since the FTB-5240S always operates using the full power range of the unit, you will notice that the **Power Range** dial is not displayed in the **Control** window.
