## Next-gen multifiber connector inspection

Smarter network in sight.

## What are tips, nozzles and special adapters and what are they used for?

EXFO's next-gen multifiber inspection solution is versatile and leverages the same tip for all multifiber connectors. To adapt to each specific multifiber connector form factor, just swap the nozzle. This versatile design makes it possible to optimize cost of ownership and ease of use. To inspect Bulkhead (female) and Jumper (male) tips, the solution will either rely on a dedicated nozzle (Q-ODC-12®, OptiTip®) or a single Bulkhead (female MPO) nozzle with a specific adapter to inspect Jumper (male MPO).

### Is my FIP-400B MF-Ready?

EXFO's next-gen multifiber solution is compatible with FIP-400B MF-Ready versions. To verify if it's MF-Ready, check your FIP-400B for the black retaining nut and the MF-Ready engraving.

If your FIP-400B is not MF-Ready, contact EXFO at isales@exfo.com for an upgrade.
