**IQS-5240S-P/BP Optical Spectrum Analyzers**

Highly accurate, easy-to-use intelligent optical spectrum analyzers (OSAs) for current and next-generation networks.

**KEY FEATURES**

- Pol-Mux OSNR measurement capability for 40G and 100G coherent signals, compliant with the IEC 61282-12 standard (under revision)
- Flexibility to analyze WDMs, EDFAs, drift, spectral transmittance, FP and DFB lasers
- Automatic impairment identification for faster troubleshooting
- Compliant with Recommendation ITU-T G.697
- Fast, accurate scans—no compromise on dynamic range or resolution bandwidth
- GPIB or LAN remote control using SCPI commands
- One-button operation for easy setup and automatic measurement

**COMPLEMENTARY PRODUCTS**

**Platform**

- IQS-600
- High-Speed Multiservice Test Module
- IOS-88100NGE Power Blazer
**UNIQUE POL-MUX OSNR MEASUREMENT TECHNOLOGY**

OSNR has long been recognized as a key performance indicator in wavelength-division multiplexing (WDM) networks, because it provides a multichannel assessment of signal quality in a very short period of time. In addition, OSNR can predict bit error rate (BER) within just a few minutes, while typical BER tests must run for hours or days.

The IEC 61280-2-9 standard defines OSNR measurement as the power ratio between the signal power and the noise at half the distance between the peaks. However, in ROADM or 40 Gbit/s systems, this method may lead to incorrect results, because the noise level between the peaks is no longer directly correlated with the noise level at the channel wavelength. EXFO's in-band OSNR is the answer to this challenge.

For Pol-Mux signals at 40G and 100G, neither the IEC nor the in-band method work. This calls for a new measurement method: Pol-Mux OSNR.

**FIRST POL-MUX OSA IN THE MARKET**

EXFO's Pol-Mux OSA is the first third-party instrument for Pol-Mux OSNR measurements that is not limited to any specific system vendor. The new commissioning assistant, which is the key feature of the new Pol-Mux OSA, is perfect for Pol-Mux OSNR measurements during turn-up. Based on the channel shutdown method, it provides highly accurate amplified spontaneous emission (ASE) OSNR measurements.

The commissioning assistant can be utilized after the user has first taken a measurement at the receiver with all of the channels turned on, and then acquired a series of traces, each taken with one channel turned off. The Pol-Mux OSA then performs the Pol-Mux OSNR calculations via a user-friendly wizard.

The commissioning assistant therefore greatly accelerates OSNR measurements based on the channel shutdown method, and drastically reduces potential human errors. In addition, two standards-compliant calculation approaches are available in the commissioning assistant: one compliant with the IEC-61282-12 standard (under revision), and the other compliant with the China Communications Standards Association (CCSA) method YD/T 2147-2010.

**IMPAIRMENT IDENTIFICATION FOR FASTER TROUBLESHOOTING**

WDM networks are becoming increasingly complex, with new technologies being deployed (tighter channel spacing, polarization-multiplexed signals, etc.) that increase the number of potential causes for failure. While past impairment types were relatively few and well-known (excessive loss, high dispersion, excessive ASE noise, etc.), these newly deployed technologies give rise to previously uncommon impairments, such as crosstalk and nonlinear effects.

This is now possible with EXFO's WDM Investigator, which provides detailed information about the signal and noise for each channel. The WDM Investigator provides information on link characteristics, such as the presence of polarization-multiplexed signals or the presence of carved noise due to filters or ROADM. It also checks the presence of several types of impairments (crosstalk, non-linear effects, carrier leakage and PMD pulse spreading), and gives an assessment of their severity (OK, warning, risk).

**HIGH RESOLUTION FOR DENSE SIGNAL ANALYSIS**

With 33 pm (or ~4.5 GHz) resolution bandwidth defined as the FWHM of the OSA filter shape, the IQS-5240BP can analyze all densely spaced signals, including important 25 GHz ITU-grid WDM signals, and any high-speed modulated lasers/emitters.

Combined with a very sharp rejection ratio (~35 dBc at 0.1 nm), the optical signal-to-noise ratio (OSNR) and modulated band profile can be measured with high accuracy. To ensure accurate noise and broad signal power measurements, the noise-equivalent bandwidth (NEB) of the OSA is calibrated at many points from 1250 nm to 1650 nm.
ANALYZE ANY WDM NETWORK

The IQS-5240S-P/BP OSA series covers your DWDM applications and all channel spacings from 12.5 GHz DWDM to CWDM. This is what we call “no-compromise performance,” whatever your network specificities and testing requirements may be.

FLEXIBLE AND POWERFUL AUTOMATION

Thanks to the IQS-600 platform’s Windows-based open architecture and Ethernet connectivity, the IQS-5240S-P/BP OSA test modules can be easily controlled remotely using SCPI commands.

QUICKER SETUPS–EASIER TESTING

The application software has been designed to optimize all testing operations—boosting productivity.
ADVANCED EDFA ANALYSIS
Since amplifiers are critical elements in all networks, it is crucial to ensure that they are optimized, that the gain is well-distributed and that the output power is flat. Now, you can further optimize EDFAs by measuring key parameters such as gain per channel, noise figure, gain flatness and gain slope. More importantly, you can save and print this precious information.

DRIFT MEASUREMENTS
You can monitor power, wavelength and OSNR over time. Follow the evolution of these critical parameters, set relative or absolute thresholds and get alarm notifications when they are crossed. You can also visualize the current and historical status of all channels in a single interface called drift dashboard, which enables you to view the WDM trace of any acquisition that displays a change of state (i.e., when a threshold is crossed).

ACCURATE SPECTRAL TRANSMITTANCE
With the advent of larger spectral content through the implementation of 40G and 100G, knowing the bandwidth of any given filter and the residual network bandwidth guarantees proper transmission. The Spectral Transmittance software feature compares the filtered wavelength to the nominal one, showing insertion loss, channel isolation and bandwidth at different power levels.

IN-DEPTH DFB LASER ANALYSIS
Make sure your transmitters are within specifications. With the DFB Laser Analysis feature, you can characterize a DFB laser source for central wavelength, peak power, bandwidth, side-mode suppression ratio (SMSR) and much more.

EXFO Connect
AUTOMATED ASSET MANAGEMENT. GET CONNECTED.
EXFO Connect pushes and stores test equipment automatically in the cloud, allowing you to streamline test operation from build-out to maintenance.

### Notes

- All specifications are for a temperature of 23 °C ± 2 °C with an FC/UPC connector unless otherwise specified, after warm-up.
- From 1520 to 1610 nm.
- After user calibration in the same test session within 10 nm from each calibration point.
- Typical.
- Integrated and wavelength-independent self-adjustment.
- Full width at half maximum.
- Over one minute in continuous acquisition mode.
- With averaging.
- At 1550 nm, –10 dBm input.
- For an optical noise level of >–60 dBm.
- With PMD ≤15 ps and no crosstalk, uncertainty specification is valid for OSNR ≤ 25 dB.
- Repeatability specification is valid for OSNR ≤ 25 dB.
- Except for Pol-Mux and fast polarization scrambled signals.
- 45 nm span, full resolution, 20 peak analysis.
- 1525 nm to 1570 nm.
- Data acquisition and analysis available on FTB-500 and FTB-2 Pro. On FTB-200v2, data acquisition on the platform and data analysis on PC.

**ORDERING INFORMATION**

**IQS-5240S-NS1623-XX-ADV-XX**

- **Polarization controller option**
  - 00 = Without polarization controller
  - P = With polarization controller

  Example: IQS-5240S-NS1623-P-EI-EUI-89-Adv-InB

**IQS-5240BP-NS1594-XX-ADV-XX**

- **Connector adapter**
  - EI-EUI-28 = UPC/DIN 47256
  - EI-EUI-76 = UPC/HMS-10/AG
  - EI-EUI-89 = UPC/FC narrow key
  - EI-EUI-90 = UPC/ST
  - EI-EUI-91 = UPC/SC
  - EI-EUI-95 = UPC/E-2000
  - EA-EUI-28 = APC/DIN 47256
  - EA-EUI-89 = APC/FC narrow key
  - EA-EUI-91 = APC/SC
  - EA-EUI-95 = APC/E-2000

- **Software option**
  - Adv = Enables advanced measurement mode
  - InB = Enables the in-band OSNR option
  - Inv = Enables the WDM Investigator option
  - Com = Enables the commissioning assistant option

  Example: IQS-5240BP-NS1594-EI-EUI-89-Adv-InB

Notes:
- a. Always included.
- b. Available with IQS-5240S-P only.
- c. Requires InB enabled.

**LASER SAFETY**

Class 1 laser product in compliance with standards IEC 60825-1: 2007 and 21 CFR 1040.10. Laser radiation may be encountered at the output port.

**SOFTWARE OPTIONS**

**GENERAL SPECIFICATIONS**

- **Temperature operating** 0 °C to 40 °C (32 °F to 104 °F)
- **Storage** −20 °C to 50 °C (−4 °F to 120 °F)
- **Relative humidity** 0 % to 95 % noncondensing
- **Connectors** EI (EXFO UPC Universal Interface), EA (EXFO APC Universal Interface)
